DETAILED ACTION

1. Claims 1-15 are pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 14 recites the limitation "processing means of said obtaining step and said determining steps to between said ingress edge nodes and a control device concentratedly controlling said respective nodes, mutually" in lines 9-11. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 13-15 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. While the claims recite a series of steps or acts to be performed, a statutory "process" under 35 U.S.C. 101 must (1) be tied to particular machine, or (2) transform underlying subject matter (such as an article or material) to a different state or thing, see page 10 of In Re Bilski 88 USPQ2d 1385. The instant claims are neither positively tied to a particular machine that accomplishes the claimed method steps nor transform underlying subject matter, and therefore do not qualify as a

Art Unit: 2416

statutory process. The wide area load sharing control method including steps of obtaining statistic information, determining a distribution ratio and switching over is broad enough that the claims could be completely performed mentally, verbally or without a machine nor is any transformation apparent.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Callon (US 7,206,861 B1) discloses a network traffic distribution across parallel paths.
